

To put your bearings into operation as quickly and smoothly as possible we provide supervision and support during installation in compliance with the specified parameters.

Our service package “Bearing installation and/or exchange supervision and support” contains:

- Evenness measurement in accordance with DIN EN ISO 1101
- Bearing positioning
- Bolting
- Alignment of the gear teeth
- Connection of the lubrication system
- Initial measurement of tilting clearance and reduction
- Commissioning (not in every case)

The added value for you:

- ➔ Long service life
- ➔ High availability of production assets
- ➔ Safety
